

### **Employee Spotlight: Christina Domanski, PE, CEM — Controls Engineer**

Since joining McClure in 2018, Christina Domanski has become a cornerstone of the Controls Engineering team — a problem solver, collaborator, mentor, and valued resource across departments.

---

#### **Growing Her Expertise at McClure**

Christina came to McClure after years of experience in building automation and engineering leadership, but it was the company's culture and technical excellence that convinced her to make the leap.

She recalls being consistently impressed by the quality of McClure's mechanical drawings and the strong working relationships she built during cross-company collaborations. Once she officially joined, she immediately felt aligned with the culture of teamwork, transparency, and genuine support.

As a Project Controls Engineer, Christina's work touches a wide range of systems, teams, and clients. What she loves most is the variety:

“Every day is different, jumping from project to project, fielding questions, adapting to requests, managing priorities.”

Her ability to balance shifting demands while maintaining clarity and calm makes her a go-to resource for colleagues across the organization.

---

### Making an Impact Through Relationships

Christina thrives in a role where connecting with others is just as important as technical expertise. One of her favorite parts of working at McClure is the network of relationships she’s built — internally with engineers, project managers, and ESCO teams, and externally with building automation professionals she has worked with for nearly two decades.

She loves being the person others turn to for answers, clarity, or direction:

“I like that I can be a resource to people, helping them get to where they need to be.”

Her team, in turn, makes collaboration enjoyable through humor, openness, and a culture where communication flows freely without fear of repercussion.

---

### Project Highlights & Professional Accomplishments

One of the most defining projects of Christina’s career at McClure has been the **Capitol Complex project** — an expansive effort involving **about 15 buildings and three different controls companies**. The scale, complexity, and cross-vendor coordination required made it a project full of lessons learned for everyone involved: engineers, project managers, and controls professionals alike.

Her leadership, adaptability, and thoughtful technical guidance stood out throughout the project’s multi-year progression. Doug Boswell, Director of Engineering, describes her impact best:

**“Christina excels at leveraging her engineering expertise to guide projects from initial concept through construction. Her great attention to detail and strong organizational skills make her an invaluable member of our team, enabling seamless integration with ATC partners.”**

Christina’s certifications — **PE (Professional Engineer)** and **CEM (Certified Energy Manager)** — helped her get her foot in the door at McClure, but she credits the company for supporting her continued growth. During her tenure, McClure has encouraged and enabled her to pursue additional credentials, including:

- **EBCP – Existing Buildings Commissioning Professional**
- **CMVP – Certified Measurement & Verification Professional**

These certifications further strengthen the expertise she brings to clients and colleagues each day.

---

### **Approach to Engineering & Problem Solving**

Christina is known for her methodical, calm, and strategic approach to solving problems. She breaks challenges down into a clear “pyramid of questions,” eliminating simple causes first before diving deeper into complex system behavior.

Her mindset reflects the blend of creativity and logic that she believes defines great controls engineering.

---

### **Supporting the Next Generation**

Christina’s determination, resilience, and ability to carve her own path make her an inspiration to younger engineers. She values mentorship deeply, and much of her own approach at McClure reflects the support and guidance she received early in her career.

---

### **Life Outside the Office**

When she’s not supporting projects or helping teammates troubleshoot tough problems, Christina is driven by her role as a mom and her passion for travel. Exploring new places recharges her — especially recent adventures like hiking along the mountain ridge in Puerto Vallarta and visiting the tucked-away beaches along Mexico’s coast.

---

## Looking Ahead at McClure

Christina is continually growing her skills and excited for what's ahead. She looks forward to strengthening cross-team collaboration, deepening client relationships, and contributing to projects that push innovation while supporting the communities McClure serves.

Her combination of technical excellence, calm leadership, and genuine care for people makes her an invaluable member of the McClure team — and a standout engineer whose influence reaches far beyond the systems she designs.
